Mobile: (+92) 312 0421484 ◇ Lahore, Pakistan

EDUCATION

Information Technology University
Bachelors of Science in Computer Science

Lahore, Pakistan
Aug 2022 - Sep 2026

SKILLS

Languages	C++, Python, SQL, C#, HTML, CSS, JavaScript
Tools and Platforms	Postman, Visual Studio, VS Code, Cursor, GitHub, MySQL, MongoDB, Overleaf
Frameworks	Tailwind CSS, Express.js, React, Node.js, Pandas, Numpy, Scikit-Learn, Matplotlib
Soft Skills	Communication, Adaptability, Work Ethic

APPRENTICESHIP

MindStorm Studios
Game Programmer | [Certificate](#)

Lahore, Pakistan
Jun 2023 - Aug 2023

- Developed a game in Unity using C# for gameplay logic.
- Collaborated with 3 peers in a Rookie Game Jam, delivering a working prototype under time constraints.
- Gained valuable insight into professional game development workflows.

PROJECTS

Skillsprint (FYP) | *MERN stack, Python based AI-service*

March 2026 - ongoing

- Building an AI-powered learning platform with personalized content generation and human feedback integration.
- Implementing Duolingo-style learning design for gamified, adaptive user experience.
- Using LLMs for dynamic content generation based on user proficiency and learning pace
- Incorporating reinforcement learning from human feedback to improve content quality over time

Compiler Construction | *Construction in C++ for C++ language*

Aug 2025 - Sep 2025

- Developed the compiler in these five phases: Lexical analysis, Syntax analysis, Semantic analysis, IR generation, IR optimization

Airbnb clone | *MERN stack, JWT*

Nov 2024 - Dec 2024

- Developed a simplified Airbnb clone with role-based dashboards for User and Admin.
- Implemented JWT authentication, property listings, details pages, and booking functionality.

Cutlery Items Classifier | *Artificial Neural Networks*

Nov 2024 - Nov 2024

- Built an image classification system to identify cutlery items (fork, knife, spoon) using ANN
- Curated and labeled custom dataset with data augmentation techniques
- Achieved 89% test accuracy using Python, TensorFlow, and Keras

Remote Sensing Data and Methods | *SAR/InSAR/DInSAR*

Oct 2024 - Dec 2024

- Processed Sentinel-1 SAR data for surface deformation analysis using Jupyter Notebooks.
- Applied InSAR techniques including interferogram generation, coherence analysis, and phase unwrapping.
- Implemented DInSAR workflows for displacement mapping (subsidence/landslide detection)
